Contents of Volume 19

Number 1, January 1988

Regular Articles

M. Singh, R. Kreutzer, G. Acker, and W. Klingmüller. Localization and Physical Mapping of a Plasmid-Borne 23-kb *nif* Gene Cluster from *Enterobacter agglomerans* Showing Homology to the Entire *nif* Gene Cluster of *Klebsiella pneumoniae* M5a1 1

Susan Connolly Yost, Joanne M. Jones, and P. A. Pattee. Sequential Transposition of Tn*916* among *Staphylococcus aureus* Protoplasts 13

Roger C. Levesque and George A. Jacoby. Molecular Structure and Interrelationships of Multiresistance β-Lactamase Transposons 21

Mary E. Fling, Jan Kopf, and Cindy Richards. Characterization of Plasmid pAZ1 and the Type III Dihydrofolate Reductase Gene 30

Rabindra Nath Roy, Nancy Bigelow, and Jo-Anne R. Dillon. A Novel Insertion Sequence in the Cryptic Plasmid of *Neisseria gonorrhoeae* May Alter the B Protein at the Translational Level 39

Hatsumi Nozue, Kimiaki Tsuchiya, and Yoshiyuki Kamio. Nucleotide Sequence and Copy Control Function of the Extension of the *incI* Region (*incI-b*) of Rts1 46

Deborah A. Samac and Sally A. Leong. Two Linear Plasmids in Mitochondria of *Fusarium solani* f. sp. *cucurbitae* 57

Short Communications

Andrew D. Bergemann and Lloyd R. Finch. Isolation and Restriction Endonuclease Analysis of a Mycoplasma Plasmid 68

Karen Pepper, Gilda de Cespédès, and Théa Horaud. Heterogeneity of Chromosomal Genes Encoding Chloramphenicol Resistance in Streptococci 71

Number 2, March 1988

Regular Articles

Jean Brevet and Jacques Tempé. Homology Mapping of T-DNA Regions of Three *Agrobacterium rhizogenes* Ri Plasmids by Electron Microscope Heteroduplex Studies 75

Joseph G. Naglich and Robert E. Andrews, Jr. Introduction of the *Streptococcus faecalis* Transposon Tn*916* into *Bacillus thuringiensis* subsp. *israelensis* 84

Marie-Noëlle Simon, Rupert Mutzel, Helga Mutzel, and Michel Véron. Vectors for Expression of Truncated Coding Sequences in *Escherichia coli* 94

Stanley A. Friedman and Stuart J. Austin. The P1 Plasmid-Partition System Synthesizes Two Essential Proteins from an Autoregulated Operon 103

LAWRENCE J. ABRAHAM, DAVID I. BERRYMAN, AND JULIAN I. ROOD. Hybridization Analysis of the Class P Tetracycline Resistance Determinant from the *Clostridium perfringens* R-Plasmid, pCW3 113
BARBARA J. FROEHLICH AND JUNE R. SCOTT. A Single Amino Acid Difference between Rep Proteins of P1 and P7 Affects Plasmid Copy Number 121
THIERRY GARNIER AND STEWART T. COLE. Complete Nucleotide Sequence and Genetic Organization of the Bacteriocinogenic Plasmid, pIP404, from *Clostridium perfringens* 134
THIERRY GARNIER AND STEWART T. COLE. Identification and Molecular Genetic Analysis of Replication Functions of the Bacteriocinogenic Plasmid pIP404 from *Clostridium perfringens* 151

SHORT COMMUNICATIONS

MINNA B. ROTHEIM, BRUCE LOVE, V. THATTE, AND V. N. IYER. A Demonstration That pCU1 *tra* Gene Products Are Not Required in the Killing of *Klebsiella pneumoniae* 161
LAWRENCE J. ABRAHAM AND JULIAN I. ROOD. The *Clostridium perfringens* Chloramphenicol Resistance Transposon Tn*4451* Excises Precisely in *Escherichia coli* 164
JACQUES MAHILLON, FRANÇOISE HESPEL, ANNE-MARIE PIERSSENS, AND JEAN DELCOUR. Cloning and Partial Characterization of Three Small Cryptic Plasmids from *Bacillus thuringiensis* 169

NUMBER 3, MAY 1988

REGULAR ARTICLES

TSU-NING TAI, WENDY A. HAVELKA, AND SAMUEL KAPLAN. A Broad-Host Range Vector System for Cloning and Translational *lac*Z Fusion Analysis 175
ANNE-MARIE BIROT AND FRANCINE CASSE-DELBART. Map Location on *Agrobacterium* Root-Inducing Plasmids of Homologies with the Virulence Region of Tumor-Inducing Plasmids 189
STEVEN J. PROJAN AND RICHARD NOVICK. Comparative Analysis of Five Related Staphylococcal Plasmids 203
JASENKA PIGAC, DUSICA VUJAKLIJA, ZORA TOMAN, VERA GAMULIN, AND HILDGUND SCHREMPF. Structural Instability of a Bifunctional Plasmid pZG1 and Single-Stranded DNA Formation in *Streptomyces* 222
SIERD BRON, ERIK LUXEN, AND PIET SWART. Instability of Recombinant pUB110 Plasmids in *Bacillus subtilis:* Plasmid-Encoded Stability Function and Effects of DNA Inserts 231

SHORT COMMUNICATIONS

WADE H. BINGLE. Transformation of *Azotobacter vinelandii* OP with a Broad Host Range Plasmid Containing a Cloned Chromosomal *nif*-DNA Marker 242
THIERRY ALLIOTTE, LI HUANG ZHU, MARC VAN MONTAGU, AND DIRK INZÉ. Plant Expression Vectors with the Origin of Replication of the W-Type Plasmid Sa 251
WESLEY A. VOLK, BERNARD BIZZINI, KEVIN R. JONES, AND FRANCIS L. MACRINA. Inter- and Intrageneric Transfer of Tn*916* between *Streptococcus faecalis* and *Clostridium tetani* 255

AUTHOR INDEX FOR VOLUME 19 260

Instructions to Authors

The primary content of the Journal consists of reports of original research into the biology of extrachromosomal gene systems and mobile genetic elements in both prokaryotic and eukaryotic organisms including their biological behavior, their molecular structure and genetic function, their gene products, and their use as genetic tools.

Plasmid encourages the preparation of both minireviews and short, focused review articles in active areas of research involving extrachromosomal gene systems and mobile genetic elements. Such articles may be at the request of the Editors-in-Chief or, alternatively, authors may submit a short proposal for such a review to the Editors-in-Chief.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in triplicate (one original and two photocopies), including three sets of figures, to:

Plasmid
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101
Telephone: (619) 230-1840

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process.

Authors may suggest assignment to an editor or one of the Editors-in-Chief at the time of manuscript submission. Authors outside North America may elect to submit manuscripts directly to an appropriate member of the Editorial Board.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published and is not being considered for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in *Plasmid* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten with wide margins on high-quality bond paper, using double or triple spacing throughout. Subdivision of articles into Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References is recommended. The manuscript must begin with an Abstract. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and planned to fit the proportions of the printed page (5½ × 8 inches; column width, 2½ inches). Lettering on drawings should be large enough to take a reduction of 50 to 60%.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. The photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. For best reproduction provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. Illustrations in color can be accepted only if the authors defray the cost.

With respect to halftone prints, authors are reminded that they are responsible for ensuring that the quality of the print is sufficient to ensure clear reproduction. This refers especially to photographs of gels and electron micrographs. In case of doubt, Academic Press will be happy to provide advice.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text. Footnotes to tables should be typed directly beneath the tables.

References. Names of authors should be mentioned in the text with the year of publication in parentheses. References should be listed alphabetically at the end of the paper as follows:

ENNS, R. E., GARLAND, A. M., AND SMITH, D. W. (1986). M13-*ori C* cloning vehicles: Use for amplification of high copy lethal (HCL) genetic elements. *Plasmid* **15,** 147–155.

MESSING, J. (1983). New M13 vectors for cloning. *In* "Methods in Enzymology" (R. Wu, L. Grossman, and K. Moldave, eds.), Vol. 101, pp. 20–78. Academic Press, Orlando, FL.

The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index,* 1985.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscripts in preparation," "unpublished observations," and "personal communications."

Abbreviations and symbols. The author is asked to follow the usage established by "A Proposal for a Uniform Nomenclature in Bacterial Genetics" (Demerec *et al., Genetics* **54,** 61, 1966); and "Uniform Nomenclature for Bacterial Plasmids: A Proposal" (Novick *et al., Bacteriol. Rev.* **40,** 168, 1975). Abbreviations for units should follow the Système Internationale.

Nomenclature of microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text, and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed 1000 words of text. Do not use any section headings except Acknowledgments and References. All Short Communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure).

Plasmid publishes physical and genetic maps of important plasmids and related elements. Manuscripts should be in the form of a short communication and should include a brief description of the element, a paragraph mentioning any special methods used, and another outlining the mapping strategy. A detailed description of the experiments should be provided with the manuscript. This will be made available to reviewers and will be filed by the editor-in-chief for future reference by interested parties. Its existence will be noted in the manuscript.

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the corresponding author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the proofs.

Methods in the Biological Sciences
from Academic Press Journals

ANALYTICAL BIOCHEMISTRY

An International Journal of Methods in the Biological Sciences

Editor-in-Chief
William B. Jakoby
National Institutes of Health, Bethesda, Maryland

Editorial Office: 1250 Sixth Avenue, San Diego, CA 92101, U.S.A.

Publishing Methods in Molecular Genetics: Cloning, Sequencing, and Mutagenesis

Analytical Biochemistry emphasizes methods and methodology in the biological and biochemical sciences and all related fields. The journal publishes original research as well as reviews of methods.

Volumes 168–175 (1988), 16 issues
In the U.S.A. and Canada: $880.00

ISSN 0003-2697
All other countries: $1039.00

Manuscripts may be submitted in quadruplicate to:
Editorial Office, 1250 Sixth Avenue, San Diego, CA 92101

Sample copies and privileged personal rates are available upon request.
For more information, please refer to no. S8100 and write or call:

New Biochemistry Titles

CONVENIENT SPIRALBOUND VOLUME FOR LABORATORY USE!

NEUROENDOCRINE PEPTIDE METHODOLOGY

edited by
P. Michael Conn

A Volume in the SELECTED METHODS IN ENZYMOLOGY Series

Among scientific disciplines witnessing the greatest growth in recent years are the neurosciences. This volume, contains articles from Volumes 103 and 124 of **Methods in Enzymology** which have been updated as needed, as well as 18 *new* articles from Volume 168 which are being published in this spiralbound version almost simultaneously with their appearance in Volume 168.

Key Features of **Neuroendocrine Peptide Methodology**:

- Convenient benchtop format
- Methods presented for easy adaptation to new systems
- Comprehensive protocols for
  - Gene Expression and *in Situ* Hybridization
  - Measurement of Hormone Release
  - Assessment of Second Messengers
  - Preparation of Derivations, Peptides, and Antibodies
  - Electrophysiology
  - "High-Tech" Advances

August 1988, c. 926 pages
$55.00 (tentative)
ISBN: 0-12-185150-8

PROCESSING AND PRESENTATIONS OF ANTIGENS

edited by
Benvenuto Pernis, Samuel C. Silverstein, and Henry J. Vogel

Antigen processing and presentation comprise a series of events that constitute an essential part of the biology of the immune response to T-dependent protein antigens. This book presents current research in this area which will familiarize the reader with the similarities and differences in these events which lead to class I restricted virus-specific responses as compared with class II restricted helper T cell responses.

1988, 324 pages, $75.00
ISBN: 0-12-551855-2

NEURONAL AND GLIAL PROTEINS

Structure, Function, and Clinical Application

edited by
Paul J. Marangos, Robert M. Cohen, and Iain C. Campbell

Recent techniques of protein purification and molecular biology make it possible to study brain proteins in new, informative ways. The purpose of this book is to review all neural and glial proteins that have been characterized to date, including the Thy-1 antigen, growth factors, PGP-9.5, and myelin-associated glycoproteins. Clinical applications of brain proteins are stressed in areas such as tumor markers, differentiation, and cell-type markers.

1988, 382 pages, $65.00
ISBN: 0-12-470348-8

FIBRONECTIN

edited by
Deane R. Mosher

A Volume in the BIOLOGY OF EXTRACELLULAR MATRIX Series

CONTENTS: Primary Structure of Fibronectin. Physical Properties of Fibronectin. Fibronectin Domains and Receptors. Fibronectin and the Pericellular Matrix. Fribronectin-Cytoskeleton Relationships. The Assembly of the Fibronectin Matrix in Cultured Human Fibroblast Cells. Roles of Fibronectins in Embryogenesis. Fibronectin in Would Healing. Fibronectin and Malignant Transformation. Fibronectin: A Contender in Platelet Adhesive Functions. Interactions of Pathogenic Microorganisms with Fibronectin. Fibronectin and the Kidney. Role of Fibronectin in Rheumatic Diseases. Kinetics of Plasma Fibronectin: Relationship to Phagocytic Function and Lung Vascular Integrity. Preparation of Fibronectin for Therapeutic Administration.

September 1988, c. 448 pages
$89.00 (tentative)
ISBN: 0-12-508470-6
